

Shifa Herbal Remedies

Pricing Proposal & Running-Cost Breakdown

Please note. All figures below are **indicative estimates in Indian Rupees (₹)** intended as a starting point for discussion. Third-party charges (cloud, WhatsApp, courier, payment, email, SMS) are billed by those providers and are **pass-through costs** — they are paid at actuals and their published rates change over time, so please confirm the current rate before finalising. Taxes (GST) are extra where applicable. This is a commercial quotation, not a binding contract. Prepared by Weblithic • Valid 30 days from issue.

1. What Shifa is getting

This is not a template website — it is a **complete custom e-commerce + Order Management System**: a customer storefront (installable app, bilingual, SEO-ready) *and* a full staff back-office (orders, packing, courier dispatch, COD reconciliation, inventory, procurement, finance, GST invoicing, reports, CRM, audit). Comparable custom builds in the market are typically quoted at **₹1,50,000–₹3,00,000+**. Our pricing below is kept deliberately lean to stay competitive with local Indore vendors while delivering far more capability.

2. One-time development & setup

Choose the package that fits. All packages include the storefront + admin OMS, deployment to your cloud server, HTTPS setup, data/logo/branding setup, and handover training.

Package	Best for	One-time fee (₹)
STARTER	Store + core order management, COD, basic reports, mock integrations.	11,000 – 15,000
STANDARD ★ recommended	Everything in Starter + online payments, GST invoicing, inventory, coupons, reviews, branded email.	18,000 – 23,000

PREMIUM

Full platform: procurement, finance/P&L, CRM, audit, analytics dashboard, WhatsApp + courier live setup.

25,000 – 32,000

The application as currently built corresponds to the **Premium** scope. To keep it affordable, we recommend the **low-upfront monthly plan** in Section 7 instead of a large one-time fee. Cloud, WhatsApp, courier, payment and email are **billed separately** (Section 4).

3. Annual Maintenance & Support (AMC)

Keeps the app healthy after launch: bug fixes, security patches, minor tweaks, uptime checks and priority support. Optional but recommended.

Plan	Includes	Monthly (₹)	Annual (₹)
Basic	Bug fixes, security updates, email support, monthly backup check.	1,500	15,000
Growth ★	Basic + small content/feature tweaks (up to ~4 hrs/mo), priority support, uptime monitoring.	4,000 – 5,000	45,000 – 55,000
Pro	Growth + ~10 hrs/mo enhancements, quarterly feature planning, faster SLA.	6,000	60,000

The **Growth** plan is what powers the recommended low-upfront offer below. Third-party usage charges (WhatsApp, cloud, courier, payment, email) are **not** included and are billed separately at actuals.

4. Recurring running costs (third-party, pass-through)

These are billed by external providers at actuals. During the demo/early phase most can run on **free tiers**, so the real monthly cost starts near ₹0 and grows only with order volume.

4.1 Hosting / Cloud server

Option	Notes	Cost (₹)
--------	-------	----------

Oracle Cloud Always-Free VM (current)	1 small VM running app + MySQL. Fine for launch & low volume.	0 / mo
Entry VPS / cloud upgrade	When traffic grows (more RAM/CPU) — e.g. a 2 GB cloud VM.	500 – 1,500 / mo
Managed / scaled cloud	Separate DB + app servers, higher traffic.	2,500 – 6,000 / mo

Currently ₹0 on Oracle's free tier. Upgrade only when order volume demands it.

4.2 Domain & SSL

Item	Notes	Cost (₹)
Domain name (.com / .in)	Renewed yearly.	800 – 1,200 / yr
SSL certificate (HTTPS)	Free via Let's Encrypt, auto-renewed.	0

4.3 WhatsApp Business API

Used for order confirmations, dispatch/tracking and status updates. Meta charges **per conversation** (not per message), and most access is via an official partner (BSP) that adds a platform fee.

Component	Notes	Indicative cost (₹)
Meta conversation charge	Per 24-hr conversation; varies by type (utility/marketing). Service replies within the window are largely free.	~0.10 – 0.80 each
Partner (BSP) platform plan	e.g. Interakt / AiSensy / Wati style monthly plan.	~1,000 – 2,500 / mo

Can stay in free "mock" mode for the demo. Verify current Meta & BSP rates before go-live.

4.4 Courier / Shipping

Paid **per shipment**, usually through an aggregator (Shiprocket, Delhivery, etc.). Rate depends on weight and destination zone; the business typically recovers this via shipping charges.

Component	Notes	Indicative cost (₹)
Per shipment (up to ~0.5 kg)	Local → national zones.	~30 – 90 / shipment
COD remittance fee	Some couriers charge a small % or flat fee on COD.	~1% or ₹20–40
Aggregator plan	Often free/pay-as-you-go at low volume.	0 – 1,000 / mo

4.5 Email

Option	Notes	Cost (₹)
Gmail / Google Workspace	Free personal Gmail works for low volume (current setup). Workspace for a branded address.	0 – ~150 / user / mo
Transactional email service	e.g. Brevo (free ~300/day) or Amazon SES (very low per-email) when volume grows.	0 – ~500 / mo

4.6 Payment gateway

Component	Notes	Cost (₹)
Setup	Razorpay / Cashfree / PayU — typically no setup fee.	0
Per online transaction	Charged as a % of order value + GST. COD orders have no gateway fee.	~2% + GST

4.7 SMS (optional)

Component	Notes	Cost (₹)
Transactional SMS	Only if OTP/SMS alerts are added later; needs DLT registration.	~0.15 – 0.25 / SMS

Not currently used — WhatsApp + email cover notifications.

4.8 Backups & storage

Component	Notes	Cost (₹)
Database backups	Nightly backup already built-in; stored on the server/cloud free tier.	0
Off-site object storage (optional)	For extra-safe off-server backups & images at scale.	~100 – 400 / mo

5. Example monthly running cost

Scenario	What's running	Approx. monthly (₹)
Launch / demo	Free-tier cloud, Gmail, mock WhatsApp/courier, COD only.	≈ 0 – 200
Early live (low orders)	Free/entry cloud, WhatsApp BSP, courier pay-per-use, online payments.	≈ 1,500 – 3,500
Growing	Upgraded cloud, higher WhatsApp/courier volume, transactional email.	≈ 4,000 – 8,000

Plus per-order courier and per-transaction payment fees, which scale with sales (and are normally recovered from the customer).

6. Optional add-ons

- PWA push notifications for order updates — ₹8,000 – 15,000 one-time.
- Server-side rendering (SSR) for faster first paint / stronger SEO — ₹15,000 – 25,000 one-time (needs a slightly larger server).
- Multi-courier rules & rate comparison — ₹15,000 – 30,000 one-time.
- Google/Meta analytics + marketing pixel setup — ₹3,000 – 6,000 one-time.
- Extra language / regional content — quoted per scope.

7. Suggested offer (low-burden, recommended)

₹20,000 – 25,000 upfront + ₹4,000 – 5,000 / month

The full platform (Premium scope) delivered, deployed and supported — with a **small upfront fee** so it doesn't burden the client, and a modest monthly fee that covers ongoing maintenance, updates, uptime monitoring and support.

Billed separately (at actuals): WhatsApp Business API, cloud/hosting, courier/shipping, payment-gateway fees and email — see Section 4. Most of these run on **free tiers** at launch, so the real starting cost stays very low.

Alternative: one-time buyout

Prefer to pay once instead of monthly? The full platform can be bought outright for a **one-time ₹25,000 – 32,000** (Premium package, Section 2) with an optional Basic AMC of ₹1,500/month. Third-party charges are still separate at actuals.

Third-party provider rates (Meta/WhatsApp, couriers, payment gateways, cloud) are set by those companies, change over time, and are billed directly at actuals. Please verify the latest published rates before committing. GST extra where applicable.
