

API Specification: Create Order

This API allows clients to programmatically create shipments by providing customer, shipment, product, and authentication details.

1. Endpoint Information

- HTTP Method: **POST**
- Test URL:
- Production URL : <https://head.quikshipx.com/api/create-order-v1>

2. Headers

Key	Value
Content-Type	application/json

3. Request Body (JSON)

The request body is a JSON object containing four primary sections: **customer_details** , **shipment_details** , **product_details** , and **shipper_details**.

> An example is provided at the last page.

To test the API use the TEST secret , and to use the API for booking parcels use the LIVE SECRET. Information on generating the Secrets is given at the last.

A. Customer Details

Information regarding the recipient of the shipment.

FIELD	TYPE	DESCRIPTION
customer_full_name	String	Full name of the customer
customer_phone_number	String	Primary contact number.
customer_full_address	String	Detailed delivery address.
customer_pincode	String	Area postal code.
customer_order_id	String	Unique ID for the order from your system.
customer_order_date	String	Date of the order (e.g., "14 March 2026").
customer_address_type	String	1 for Home, 2 for Office.
customer_email_id	String	Email address of the customer. (Optional)
customer_alternate_phone_number	String	Alternate contact number (Optional)
customer_landmark	String	Nearby reference point for delivery. (Optional)

B. Shipment Details

Physical and logistical attributes of the parcel.

Field	Type	Description
shipment_package_type	String	1 for Flyer, 2 for Cardboard.
shipment_dead_weight_in_grams	String	Weight of the package in grams.
shipment_length shipment_width shipment_height	String	Dimensions of the package in cm.
shipment_shipping_mode	String	1 for SURFACE, 2 for EXPRESS.
shipment_pay_mode	String	1 for COD, 2 for PREPAID.
order_amount	String	Original value of the product.
cod_amount	String	Amount to be collected (0 for prepaid).
commodity_amount	String	Original amount of the order. Without any discounts. Refundable value if the parcel is lost.
shipping_amount	String	Delivery charge levied by seller
discount_amount	String	Discount on the Commodity amount. Default 0

    "user_secret": "your user secret "
  }
}
```

Generating Test and Live Secret's :

The 'Manage APIs' section includes:

- TEST Secret: A field to enter the test secret.
- LIVE Secret: A field to enter the live secret.
- Custom API Details: A table with columns for Client Code, User ID, Warehouse ID, and Address.
- Create New Token: A button to generate a new token.

The 'Create New Token' button is highlighted with a red arrow and a callout box that says: "Click on 'Create New Token' to generate the Secret".

Order booked using Live Secret will appear under "Pending" section

Order booked using Test Secret will appear under "Test" section
